

Course Title: Biostatistical Methods for Clinical Research III
Course Number: Biostatistics 209
Spring 2017

A. Objectives

This is the third course in a statistics sequence, covering multi-predictor regression methods in survival and repeated measures outcome data. Emphasis is on the practical and proper use of statistical methodology and its interpretation. The statistics package STATA will be used throughout the course.

At the end of the course, students will be able to:

- Conduct a Cox proportional hazards analysis for survival data
- Undertake a data analysis with repeated measures outcome data
- Perform and write up the results of a data analysis for class discussion

B. Prerequisites

Designing Clinical Research (Epi 202), Biostatistical Methods II (Biostat 208), and possession of a M.D., Ph.D., D.D.S. or Pharm.D. or equivalent doctoral degree. Exceptions to these prerequisites may be made with the consent of Dr. Kornak, space permitting.
