

ORDER OF REPORT FOR ANTEPARTUM VISIT

(Before you've seen the patient, when you're presenting them to your preceptor after you've precharted)

_____ (patient name) _____ (pronouns) is a _____ (age) year old G_P_ at _____ weeks by _____ (LMP or sono; if by LMP, say "LMP, confirmed by ____ week sono"). Their antenatal (or contributory medical) issues include: _____, _____, and _____ (the major issues or the ones that are relevant to this visit, i.e. anemia for which they are taking ferrous sulfate, recurrent UTI for which they are taking macrobid suppression...etc.). Today, I am planning to discuss _____, _____, and _____ with them (i.e. third trimester labs, getting a breast pump, Tdap vaccine).

Example:

Stephanie (she/her) is a 25 year old G1P0 at 32 weeks and 4 days by LMP confirmed by 10 week sono. Her antenatal issues include carpal tunnel syndrome, cystic fibrosis carrier (partner testing was negative), and low weight gain this pregnancy. Today, I am planning to order her a breast pump, talk to her about her family planning options, and check-in with her about her diet and weight gain since the last visit. She already got the flu and Tdap vaccines, and her pediatrician is going to be MD Kahn. If there's time, I'd also like to go over her birth plan with her. Her next visit will be in 2 weeks, and I will check if she would prefer to do it by phone or in person.

ORDER OF REPORT FOR ANTEPARTUM VISIT

(After you've seen the patient, when you're presenting them to your preceptor)

_____ (patient name) _____ (pronouns) is a _____ (age) year old G_P_ at _____ weeks by _____ (LMP or sono, if by LMP, say "LMP, confirmed by ____ week sono"). Their antenatal (or contributory medical) issues include: _____, _____, and _____ (the major issues or the ones that are relevant to this visit, i.e. anemia for which they are taking ferrous sulfate, recurrent UTI for which they are taking macrobid suppression...etc.). Today, I discussed _____, _____, and _____ with them (i.e. third trimester labs, getting a breast pump, Tdap vaccine). In this visit, their vitals were normal, there were positive fetal heart tones (or "fetal heart tones in the 150s"), and their FH was _____ cm. They need _____ before their next appointment (i.e. to get a follow up CBC, BP cuff ordered). I recommend that their next appointment be in _____ number of weeks.

Example:

Stephanie (she/her) is a 25 year old G1P0 at 32 weeks and 4 days by LMP confirmed by 10 week sono. Her antenatal issues include carpal tunnel syndrome, cystic fibrosis carrier (partner testing was negative), and low weight gain this pregnancy. Today, I spoke to her about her family planning options, and she is interested in a Nexplanon on Postpartum. We also discussed her diet, and she reports she has more of an appetite now. I recommended increasing the number of high-fat foods in her diet. She already got the flu and Tdap vaccines, and her pediatrician is going to be MD Kahn. I gave her a birth plan to fill out before her next visit, and I'd like to order a breast pump for her today. Her next visit should be in two weeks, and she would prefer to do it by phone.
